

ALGORITHM

1. Initialize a Scanner object to read user input
2. Define an array of strings containing the days of creation
3. Prompt the user to enter a day of creation (1-7)
4. Read the user's input and store it in a variable
5. Check if the input is within the valid range (1-7)
6. If valid, display the corresponding creation message and verse
7. If invalid, display an error message
8. Close the Scanner object
